Education

Rutgers University

Master's in Computer and Information Sciences - Data Science & AI

Jan 2025 – Dec 2026

New Brunswick, NJ

Mumbai University

Bachelor of Engineering in Information Technology

Aug 2017 – May 2022

Mumbai, India

Technical Skills

Languages: Java, Python, JavaScript, HTML/CSS, C#, SQL

Frameworks & APIs: React, Spring Boot, Flask, Bootstrap, FastAPI, RESTful APIs

Databases: PostgreSQL, MySQL, MongoDB

Cloud, DevOps & Tools: AWS, Google Cloud Platform (GCP), Docker, CI/CD pipelines, Git, Render, Cursor

Experience

Extern for CGI via Rutgers MBS Externship: AI to Automate SDLC

Sep 2025 – Dec 2025

Team Lead & Developer

New Brunswick, NJ

- Led a team of 6 members, facilitating task allocation, technical discussions, and serving as the primary point of contact between project stakeholders and the engineering team.
- Architected an AI-driven RAG (Retrieval-Augmented Generation) pipeline to automate the SDLC by mapping Jira ticket intents to specific codebase segments.
- Integrated the Jira API with Ollama LLM and ChromaDB to automate contextual intent extraction and vector-based code retrieval.
- Streamlined developer workflows by automating code modifications and GitHub commits with a robust human-in-the-loop verification layer.

TSS Consultancy

Oct 2023 – Dec 2024

Associate Product Analyst

Mumbai, India

- Coordinated directly with software engineering teams to define backend business logic and ensure timely delivery of platform features.
- Contributed to the technical development of high-scale transaction monitoring tools used by major fintech clients including Zerodha, Upstox, and Groww.
- Translated complex financial regulatory mandates (SEBI, NSE) into precise technical specifications for the development team.

Projects

Agentic Report Generator (LLM-to-SQL) | *React, Python, Flask, Groq (Llama 3), MCP, PostgreSQL, Docker* **Mar 2026**

- Built an AI-driven reporting tool using **Model Context Protocol (MCP)** to translate natural language into SQL queries, enabling non-technical teams to generate reports without developer intervention.
- Implemented a **Human-in-the-Loop (HITL)** security gate in the Flask backend that requires manual query approval via the UI, preventing unauthorized or destructive database operations.
- Enhanced LLM accuracy by providing a **Human-Readable Data Dictionary** (schema metadata) as context, significantly reducing hallucinations compared to raw SQL schema prompts.
- Streamlined the data workflow from query execution to **Excel report generation**, potentially reducing report turnaround time from days to under a minute for authorized analysts.
- **Links:** [GitHub](#) | [Demo](#)

Options Strategy Recommender | *Java, Spring Boot, React, Python, Bootstrap, CI/CD, Docker, GCP*

Jul 2025

- Built a full-stack Options Strategy Recommender using Spring Boot and React, with user inputs for ticker, strategy, expiry, and risk to suggest relevant options positions using Yahoo Finance data.
- Deployed on Google Cloud Platform with basic CI/CD setup, demonstrating skills in web app development, cloud deployment, and financial data integration.

Full Stack Machine Learning App — Stock Weekly Volatility Predictor | *XGBoost, Docker, CI/CD*

May 2025

- Engineered a REST API backend using FastAPI to fetch live data and serve dynamic web requests.
- Built and integrated a React-based frontend to consume the API endpoints and display real-time data to users.
- Containerized the full application stack with Docker and deployed it using Render, establishing reliable CI/CD workflows.
